The author, David Dudley, is a professional aquaponics consultant who has helped many individuals and companies develop aquaponics systems. His accomplished career in aquaponics, hydroponics, and aquaculture includes serving as the Construction Manager of the Oklahoma Aquarium, Engineering Manager of the nation's largest caviar producing company, overseeing life support systems of four large aquaculture facilities, designing a \$5M aquaculture operation for white sturgeon, and Project Manager of a large fishing clinic facility for the U.S. Department of Wildlife. David holds advanced degrees in civil engineering and nutrition/dietetics, owns a commercial nursery, and has several decades of experience in vegetable gardening. David understands every facet of aquaponics and clearly communicates aquaponics in a way that truly helps others. --This text refers to an out of print or unavailable edition of this title.

Great book for beginnersThis book is very detailed. All the question you have about aquaponics will be answered. The only drawback is I wish the pictures were colored. If you buy this book your money won't be a waste.

Best info I have found in all areas of aquaponics. Detailed and informative. Just wish there were exact plans for the system I wanted. I chose the fill and drain system and wanted a small one to start out. I understand why it couldn't though. So many different possibilities preventing an exact plan setup for everyone. I definitely recommend this book for everyone.

This book is great for both introduction to aquaponics and getting someone in the mindset to grow big enough for a commercial operation. The how-to's and troubleshooting sections look like gold, for when the time comes to set up and operate. If anyone wanted a great read on the topic, I'd recommend it any day. Easy to read and understand at all skill levels.

Very informative book. I'm still reading and processing information for when we start our garden. Love that it's written with a non-aquaponics person in mind. It also covers topics like different greenhouses that most sites on the web don't.

Wow! What an encyclopedia of anything aquaponic. You won't need any other reference and just need to dive into applying what you learn...the best teacher!

Great book. So many great books on aquaponics. Def one to keep around.

Detailed information, background, illustrations and explanations.

great information for anyone starting into aquaponics, well worth the price.
