Remote Pilot Test Prep - UAS: Study & Prepare: Pass Your Test And Know What Is Essential To Safely Operate An Unmanned Aircraft – From The Most Trusted Source In Aviation Training (Test Prep Series)

Synopsis

Flying a drone as a remote pilot-in-command for non-hobby operations requires a Remote Pilot Certificate issued by the Federal Aviation Administration (FAA). You must successfully complete the FAA Knowledge Exam to earn a remote pilot certificate with a small unmanned aircraft systems (sUAS) rating. This book is your key to ASA's Remote Pilot Test Prep is the best resource for successful test-taking and safe small UAS operations. This book is a comprehensive preparation, study and test tool for the remote pilot certificate ("Unmanned Aircraft General - Small") FAA Knowledge Exam. Rely on the time-proven and dependable ASA Test Prep Series to prepare for your exam; the rating requirements for the certificate are explained in detail and test material is expertly organized into chapters based on subject matter. This topical study promotes understanding and aids recall to provide an efficient study guide. Topics covered are FAA regulations, the National Airspace System, weather, loading and performance, and operations. This book is particularly helpful for drone operators interested in earning a remote pilot certificate, for Remote Pilot Aircraft (RPA) applicants, unmanned aircraft system (UAS) training programs preparing applicants for FAA exams, self-study readers interested in learning more about commercial unmanned aircraft operations, and existing (manned aircraft) pilots who want to learn more about the drone and UAS operations sharing the National Airspace System. Included are instructional text and illustrations, questions, answer stems, correct answers, explanations and references for further study. When you're done studying, you can then take up to 5 practice tests with ASA's online simulated testing program at no additional cost (codes are provided to enter at the ASA practice-test website).

ASA Test Prep Board includes editors Jackie Spanitz, Charles L. Robertson, Cliff Seretan, and Paul Hamilton. Jackie Spanitz is the director of curriculum development at Aviation Supplies & Academics, Inc., and the author of several books, including Guide to the Flight Review. Charles L. Robertson is an associate professor of aerospace at the University of North Dakota. Cliff Seretan holds a Commercial Certificate with an Instrument Rating for Single- and Multi-Engine Land Airplanes and CFI for Airplane Land and Instrument. Paul Hamilton is a sport pilot and light-sport aircraft expert, a flight instructor, and the owner of Adventure Productions Co. For the ASA Test Prep Series, all editors listed are consulted for new material for the Series. In the case of the "Visualized Flight Maneuvers Handbooks," Jackie Spanitz is the only editor who contributes to these.

I bought this book exactly a month ago to study for the Part 107 Test. This was my only study material along with few youtube videos to explain/practice more on METAR, airspace also understanding the markings on the Sectional Charts. This book can be very dry and wording can be slightly confusing. Maybe it's to prep you for the test questions. The book includes 5 prep tests online which I did all of them with a passing grade. So after 3 weeks of studying, I took the test today and passed with an 85% score. The questions were worded differently from the book and the prep tests. So ensure you have the most current study guide. I believe the 2018 edition just came out as I am writing this. This is not a very visual book and was printed black and white straightly to be cost effective, which I think was the downfall of it. There is one section that covers airport signs and airport markings. I end up looking for the exact images online and "color" it in my study guide. Not a good move for sure. Another big chunk of information that I needed help was reading the Sectional Chart, which was essential to the test. The Legend for the chart is printed in the book and you can always refer to it, but it gives out very little info if you have no clue what they mean. I did find a website that pretty much covered all the markings in the Sectional Chart with layman's term and understanding. Overall, I would definitely recommend this book to individuals that are disciplined and self-motivated. It requires you to set aside time to concentrate, read and digest all that information. To be honest - my back up plan was if I fail the test on my first try, I was going to enroll

myself in one of the online courses. Looks like I will be all set until 2019! Good luck!!!

This book helped me pass my sUAS test. While you do need more than just this book to pass, it helps make sense of the "study guide" the FAA provides. I used this book, their app (Definitely suggest spending the \$5 on it) and the FAA guide and passed with flying colors. I liked it gave you practice test questions along with why the answer was correct.

Enabled me to pass the test with little other resources. However there are more questions relating to airports and airspace on the test than what is focused upon in the book. I recommend studying some extra material on those areas if you want to ensure passing the test on your first try.

Good review for the test. I want to get information from several sources, so I took a class, read this book and did the questions and watched a few videos online. That combination helped me pass the test.

Worth the small price to get extra information to pass the FAA 107 test, 5 tests too is nice

Lot's of good examples very similar to the actual test. It's a great supplement to other training materials. This alone will not give you enough knowledge to pass the Part 107 test.

Another great prep manual as I am studying for my part 107. Haven't taken the test so a full review is not possible at this time, however this manual is a good prep.

I have been studying this guide for the past five days and an half way finished and will be looking for another book. Other than the charts in the back, it's all in black and white. I need color when describing runway signs and showing the weather charts symbols. I'm a visual learner.
