Comprehensive Heterocyclic Chemistry : Comprehensive Heterocyclic Chemistry, Five-Membered Rings With Oxygen, Sulfur Or Two Or More Nitrogen Atoms

Synopsis

Heterocyclic compounds include all nucleic acids, many sugars, vitamins, hormones, antibiotics and other synthetic pharmaceuticals, most dyes, pesticides and weedkillers. The eight volumes of this major work of reference are the most authoritative, modern and complete ever published on the subject. They give an up-to-date overview of the whole area appropriate to the needs of researchers, teachers and others with an interest in the subject and its applications, provide detailed information to answer specific questions, demonstrate exactly what is known or not known on a given topic, and direct attention to more detailed reviews. A systematic arrangement of the chapters provides a uniform treatment throughout and allows very easy access to the primary literature.

Volume 3 specifically deals with the structure, reactivity, synthesis and applications of six-membered ring compounds containing oxygen, sulfur or two or more nitrogen atoms.

Customer Reviews

1986 ...an excellent series...The chapter on Nomenclature...will most likely become the source of resolving questions on the nomenclature of heterocyclic compounds not only for the novice but also for the more experienced heterocyclic chemist...this series does provide a welcome addition to the field of heterocyclic chemistry...This series is definitely recommended as an addition to all libraries.

-- Journal of the American Chemical Society, Volume 108, Number 4 1986 This series is definitely recommended as an addition to all libraries. -- Chemistry Society, vol. 108, no. 421 April 1986 ...the index is a most worthwhile asset and provides a unifying feature for the whole series. -- Chemistry & Industry No 4 1986 ...an excellent series of volumes on Heterocyclic Chemistry...This series is

definitely recommended as an addition to all libraries. -- Journal of the American Chemistry Society.

Alan Katritzky, educated at Oxford, held faculty positions at Cambridge and East Anglia before migrating in 1980 to the University of Florida, where he is Kenan Professor and Director for the Institute for Heterocyclic Compounds. He has trained some 800 graduate students and post-docs, and lectured and consulted world-wide. He led the team, which produced "Comprehensive Heterocyclic Chemistry" and its sequel "CHECII", has edited "Advances in Heterocyclic Chemistry, Vols. 1 through 86" and conceived the plan for "Comprehensive Organic Functional Group Transformations". He founded Arkat-USA, a non-profit which publishes "Archive for Organic Chemistry" (ARKIVOC) electronic journal completely free to authors and readers at (www.arkat-usa.org). Honors include 11 honorary doctorates from 8 countries and membership or foreign membership of the National Academies of Britain, Catalonia, India, Poland, Russia and Slovenia.
