The Geography Of Transport Systems

Synopsis

This expanded and revised fourth edition of *The Geography of Transport Systems* provides a comprehensive and accessible introduction to the field with a broad overview of its concepts, methods and areas of application. Aimed mainly at an undergraduate audience, it provides an overview of the spatial aspects of transportation and focuses on how the mobility of passengers and freight is linked with geography. The book is divided in ten chapters, each covering a specific conceptual dimension, including networks, modes, terminals, freight transportation, urban transportation and environmental impacts, and updated with the latest information available. The fourth edition offers new material on the issues of transport and the economy, city logistics, supply chains, security, energy, the environment, as well as a revised content structure. With over 160 updated photographs, figures and maps, *The Geography of Transport Systems* presents transportation systems at different scales ranging from global to local and focuses on different contexts such as North America, Europe and East Asia. This volume is an essential resource for undergraduates studying transport geography, as well as those interested in economic and urban geography, transport planning and engineering. A companion web site, which contains additional material, has been developed for the book and can be found here:

Customer Reviews

Jean-Paul Rodrigue is Professor in the Department of Global Studies and Geography at Hofstra University, New York. Claude Comtois is Professor of Geography at the University of Montreal,

Canada, and is affiliated with the Research Centre on Enterprise Networks, Logistics and Transportation at the same institution. Brian Slack is Distinguished Professor Emeritus at Concordia University, Montreal, Canada.

Arrived very promptly. Is a good, modern look at logistics and transportation. Reads well at an appropriate reading level: explains terminology without using such high technical terms that would leave someone learning about logistics in confusion.
