An accomplished science and nature illustrator, Patricia J. Wynne is the recipient of the 2008 Theodor Seuss Geisel Honor and hasÃ Â won awards fromÃ Â Parenting magazine, the John Burroughs Association, and the National Science Teachers Association. Patricia'sÃ Â artwork has appeared in galleries, magazines, newspapers, and more than 100 books for both children and adults. She is the author of numerous successful Dover titles on science and design.

Dover does a great job of making information interesting to kids and does it at a reasonable price. This was for a 10 yr old boy interested in science and he loved it, said it was a really cool book. I reccomend almost anything published for kids by Dover.

I’m a psych grad who still reads her physiological psychology text book for pleasure. While this little book doesn’t delve into action potentials or agonists, it actually does a fairly good job of explaining critical concepts in a easily digestible manner.Honestly, I wish I would have had this prior to my schooling because it would have clarified things I initially struggled to understand. Sure, it’s a coloring book with maybe a dozen pages, but it still has a lot of useful information and illustrations that I can use to help the students I work with to understand the brain.

I’m using this with a few low level learners for a psychology class. It covers several brain parts and explanations decently and honestly, I’d have no problem using a few of them as a packet for my mainstream class to help them remember certain parts and functions as some are very visual learners.Price is pretty fair on this considering I dropped $12 on a junk political coloring book and was hugely disappointed in that. No glaring errors in the info here either, so if you are looking for class supplementation or a way of explaining something to a younger child/student, I’d honestly consider this option.

This has been excellent for the kids, and I’ve learned a lot myself. It makes information about the brain very accessible. Coloring the images and highlighting the text helps reinforce the memory of what is covered.

Love this book! It’s great for kids and is a nice, simple guide for the psychology student. On those exhausting days I can study while I color!

We are using these books for homeschooling. I can easily form questions from the facts on each page. Great books for early science.

My 6 year o

Love it and learned a lot. My sons and I had fun learning!!!
